

- Forty percent of bottled water begins as tap water; often the only difference is added minerals that have no marked health benefit.
- It takes one and a half to three gallons of water to produce every gallon of bottled water sold.
- Approximately 60% to 70% of the rural population in the developing world does not have access to safe or convenient water sources.
- A buried water bottle takes 1,000 years to biodegrade.

Why “Go Green”?

Got Water? Go Green.

Got Water? Go Green.

Why “Go Green”?
